PACE PRO

MAKE THE DIFFERENCE

THE FASTEST BIG AIR KITE. EVER.

With the all-new developed Pace Pro, we are expanding our range for the performance-oriented big air target group and all those aspiring to get there.

CORE's first fixed-bridle kite opens up completely new possibilities with uniquely sporty riding characteristics that are second to none. Big jumps, fast kiteloops and secure landing have never been more accessible.

The enormously stiff **3-strut airframe made of Aluula** in an extremely stretched shape combines two characteristics that are second to none in this form offering an exceptional combination of top performance in jump height, hangtime, and flight stability, along with fast looping and catching.

Set the pace. Pace Pro.

WATCH VIDEO!

SET THE PACE. PACE PRO.

Designed for all twintip enthusiasts who don't necessarily need the power and sheet-and-go of the XR Pro, but want more of a playful, fast kitesurfing experience. Just like the XR Pro, the Pace Pro embodies **exceptional materials and peak performance** - all with effortless ease of use.

"When it all comes down, when every move matters, that's when the Pace Pro makes the difference."

- GIEL VLUGT

PACE PRO HIGHLIGHTS THAT MAKE THE DIFFERENCE

ALUULA® 3-STRUT FRAME

LESS AIR RESISTANCE FOR MORE SPEED

Using Aluula, the stiffest airframe material available, we achieve an extremely thin leading edge and strut diameter. A thinner diameter means less air resistance, translating to lightning-fast kite speed. The stiff airframe allows hardly any deformation despite three struts and reacts to even the slightest steering impulse. This design makes the airframe more direct and controllable, while also providing outstanding stability at high speeds and increased power. Properly used and reinforced, CORE's Aluula meets high standards and customer requirements in terms of durability and longevity.

FIXED BRIDLE

OPTIMALLY SUPPORTED ARCH, PRECISELY CONTROLLABLE

For maximum performance, we've equipped the Pace Pro with a fixed bridle. With 14 points supporting the bow of the kite, even thinner leading edge diameters can be constructed and the position in the wind window can be influenced more. The Pace hangs more firmly on the front lines and unfolds its performance especially through the now very common pre-pop jumping technique. Its loops are consistently smooth without acceleration, and you can precisely control the kiteloop's radius to your preferences.

HIGH ASPECT RATIO

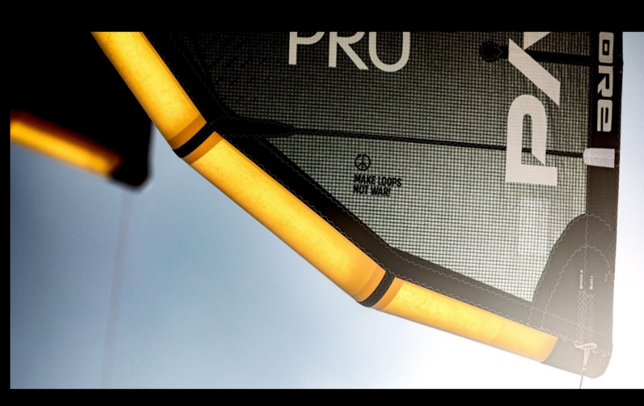
RICH POWER AND HIGH FLIGHT STABILITY

With its fixed bridle, we were able to design the Pace to be even more stretched than the XR Pro. In its special combination of High Aspect Ratio and three struts, we have managed to combine two characteristics that actually contradict each other: on the one hand, absolute top performance in terms of jump height, hangtime and flight stability and on the other hand, fast looping and safe catching.

CORETEX 2® TRIPLE RIPSTOP CANOPY

MAXIMUM STABILITY AND DURABILITY

Extremely low-stretch and at the same time very robust, the exclusive CORE flying cloth optimally supports the properties targeted for the Pace Pro with linear power delivery, high flight stability and outstanding control. The special coating ensures extremely good tear resistance, tear propagation resistance and offers very good UV protection.



SENSOR 4

THE ULTIMATE MATCH-UP: PACE PRO X SENSOR 4 BAR

The Pace Pro was developed alongside the Sensor 4. With the new Single Frontline Safety (SFS+), the kite fully depowers even with fixed bridles upon release. Experience the full spectrum of performance, functionality, and safety of the Pace Pro, along with the uniquely differentiated bar feel and numerous innovative features of the Sensor 4 and Sensor 4 Pro bar.

SENSOR 4 PRO BAR SYSTEM

SFS+ ONLY COMPATIBLE WITH SENSOR 4 SENSOR 4 PRO

PLEASE NOTE THAT THE PACE PRO MAY ONLY BE FLOWN WITH THE SENSOR 4!
Unlike the Sensor 3S and older Sensor models, only the Sensor 4's SFS+ safety ensures complete depowering of models with fixed bridles.

ZOOM INTO MORE UNIQUE DETAILS

INSTANT RELAUNCH

BACK IN THE SKY IN NO TIME

The minimal contact surface of the swept leading edge, the stiff airframe and the low weight allow the Pace Pro to be relaunched in a flash.

SPEED VALVE 2

MAXIMUM AIR FLOW

The Speed Valve 2 is firmly integrated into the leading edge instead of sitting on the outside. To inflate, the standard bayonet of the pump hose is screwed into the valve via a tooth, enabling maximum air flow. It is designed to be extra robust and therefore particularly durable.

SPEED PUMP SYSTEM

EFFICIENT AIR MANAGER

The kite is inflated via a single valve permanently incorporated into the front tube. The hoses to the struts are tidy, light and optimally connected to the struts. There is no lighter, faster and more comfortable way to inflate and bleed a kite.

GRINTEX® PATCHES

ABRASION-RESISTANT FRONT TUBE

Thanks to extremely abrasion-resistant Grintex patches on all segment seams of the Aluula front tube and struts, these sensitive areas are protected in the best possible way on any surface.

PRO

PERFORMANCE IN ITS PUREST FORM

Since 2013, we have marked products with the "Pro" label that stand for extraordinary performance and are built exclusively with the highest-grade materials and components available.

What began with the Sensor Pro has now evolved into an independent ultra high-end line: with the XR Pro, Pace Pro, Air Pro, Imperator Pro and Badger Pro our Pro Range now includes kites, bars, twin tips, and surfboards – each one a uncompromising masterpiece for riders who demand nothing but the maximum.

PRO KITES — PACE PRO: Ultra High Performance | Big Air | Kiteloop | Freestyle

PRO WINGS — HALO PRO: Challenge Anything

PRO BOARDS — IMPERATOR PRO: Ultra High Performance Freeride

PRO BARS — SENSOR 4 PRO: The Power of Simplicity and Versatility

6 YEAR REPLACEMENT PARTS AVAILABILITY

CORE kites are built to last. Our legendary durability is backed by a six-year parts availability guarantee. We will stock all Pace Pro replacement parts for a minimum of six years.

DELIVERY

The Pace Pro comes with a comfortable backpack, manual and a repair kit.

Now available at your local CORE retailer.

- Pace Pro Support
- CORE Store

COMPATIBILITY

Pace Pro is only compatible with the Sensor 4 and Sensor 4S.

Please note that the Pace Pro may only be flown with the Sensor 4 and Sensor 4S! Unlike the Sensor 3S and older Sensor models, only the Sensor 4's SFS+ safety ensures complete depowering of models with fixed bridles.
