CORE ROAMER

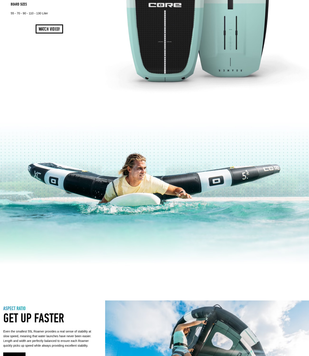
STEP ON FREEDOM

Born to fly, the Roamer wingboard line is designed to meet all the challenges of modern wingfoiling with its instant forward drive and stable feel. Sporty and responsive, yet also minimizing the early complexities of learning to ride, the carefully tuned shape ensures the easiest handling whatever the weather or water surface.

ROAMER SIZES

93 - 113 - 93 - 123 - 133 Liter

WATCH REVIEW



ASPECT RATIO

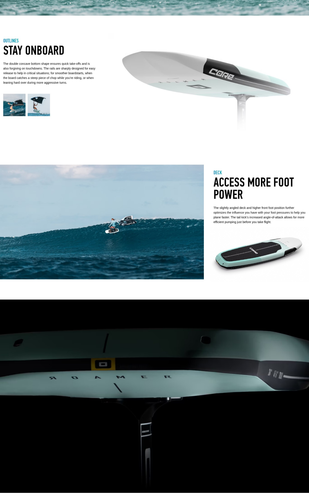
GET UP FASTER

Even the smallest 93L Roamer provides a real sense of stability at slow speed, meaning that even launches have more keen ocean. Length and width are perfectly balanced to ensure each Roamer swiftly aims up speed while always providing excellent stability.

VOLUMETRIC

ERASE YOUR MISTAKES

Volume distribution within the board is carefully designed to ensure your riding balance is fine-tuned from all directions. The wide, generous nose of the Roamer provides a stable, forgiving platform, distribute water away from the center of the board for a greater sense of control & quickly inspire higher levels of confidence.



RAILWORK

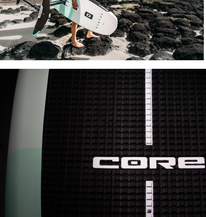
STAY ONBOARD

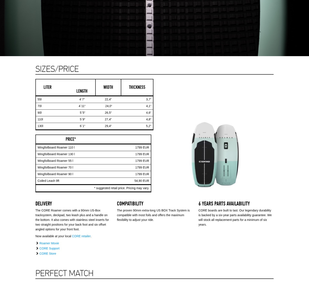
The double concave bottom shape ensures quick take-offs and is also forgiving on touchdowns. The rails are sharply designed for easy carving, but also for a stable ride in choppy conditions. Additionally, the board catches a steep piece of chop while you're riding, or when leaving hard turn during more aggressive turns.

DECK

ACCESS MORE FOOT POWER

The slightly angled deck and higher front foot position further enhances the ease of access to the rail, while also providing more drive from the front foot. The tail has a increased angle of attack allows for more efficient pumping and better you take flight.

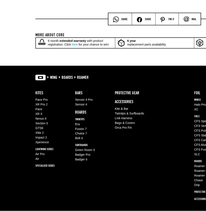




CONSTRUCTION

LONG-LASTING PERFORMANCE

The stiff carbon sandwich construction provides a direct feel and ensures the board is light and responsive underfoot. The deck is extremely lightweight and covered with a robust carbon PVC shell, protecting against pressure points and preventing water ingress.



PAGE 5 INSERTS

RELIABLE CONNECTIONS

An extra grippy pad maximizes the power of your stance. To leverage extra power in footstraps there are inserts a few deck allowing you to choose between toe straight positions for your back foot and six different positions for your front foot. The distance between the bracing back towards the rider after a fall the toe heel plugs have been positioned in the side of the board.

SIZES/PRICE

LITER	LENGTH	WIDTH	THICKNESS
93	4'7"	21.4"	5.7
