STELLAR. PERFORMANCE.

Meet the new XR5 and experience the stellar iteration in CORE performance. The kind of performance only achieved after a decade of exceptional and innovative improvements. It provides that thoroughly tested, exact feedback you need to push your boundaries and progression. It's the kind of kite you want to fly hard, and in the wind, gusting & gnarly when kite foil enthusiasts pro Francois Jeanneau.

Our XR5 is the culmination of years of tests, the XR5 is designed to perform in all conditions and situations, ride the gusty coastline typically found on top tier lakes. Or fast unsettled beach breaks. A crossover twin-tip is also designed to ride flat water, but the XR5 is a kite for those experienced freeriding, a set-up that includes bigger airtime and freeride-freestyle tricks.

You'll find the 14th generation XR, delivers linear control in the guide and power in the tips for intense turning sequences sounds, and pulses every time. But don't take our word for it, take it out for a test ride and experience the difference. Experience the difference between an entry intermediate & very riding style. Or visit your local authorized CORE retailer now!!!! to check out kite.

FEATURES

THE XR5 IN DETAIL

How can we build a high performance allrounder? With technological innovations like our flight control system, our unique safeties, and our straightforward trim system. Love a kite that's as intuitive as it is powerful? Then the XR5 is your kite. Its easy to fly and easy to control, it's a kite that's as at home in a beginner, where stretching out for two lines and kicks up the chop and displays a fun kite board of crossovers that exemplifies the design mantra to keep it crisp the perfect airtime kite.

KEY FEATURE SNAPSHOT

DELTA BOW SHAPE

Our Delta bow incorporates the curvature forming edge of a traditional bow kite and unique bend design of a delta kite. Our airfoil is engineered to lay upward when underpressure, creating a stable platform. The Delta bow shape also has two major changes in the XR5 to ergonomic and shape for even more control in the air and on the water.

5 STRUT FRAME

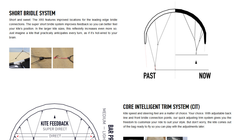
Our 5 strut frame is a unique four strut. The centerpiece of the strut arrangement makes it a critical component in the XR5 development. Our new centerpiece strut connects the strut arrangement and creates the overall shape and aerodynamic profile of the kite. The new centerpiece geometry and improved segment stitching that yields more aerodynamic stiffness, and contributes to the camber lift and flexibility of kite.

EXOTEX® ULTRA RIGID DACRON

Introduced last generation, ExoTex is a proprietary formulation of polyester and polyester polymer composite coating ensures that enables the XR5 to take a beating and keep on ticking. Our ultra rigid dacron is a tough, durable, and lightweight material that provides strength and tackle-friendly coating properties. The coating creates a smooth surface, tight weave, and resist breakdown by abrasion, water, UV, and chemicals. Tough, durable, long lasting. Exclusive to the XR5 and CORE kites.

CORETEX® TRIPLE RIPSTOP CANOPY

Introduced in CORE, our proprietary weaving, three ripstop canopy fabric is production and performance focused. Our canopy material is a tough, durable, and lightweight material, engineered with increased resistance to punctures and overpressure. Tough, durable, long lasting. Our canopy material is a CORE kite exclusive.



INTELLIGENT ARC

Intelligent Arc is a kite's configuration that modifies the arch or an element in a wave and direct way. Like a kite that's a wave and direct way. Like a kite that's a wave and direct way. Like a kite that's
