- CAM SAFETY LOCKS
- ROTATABLE SAW INSERTS
- ANTI-SLIP COATING
- LIFT LOCKS
- TWO LOOPS

FEATURES AUF VORGESTELLT

TITANIUM CORE
Maximum strength.

Titanium is known for its strength. In CEPHER, Titanium is an essentially important material. Thus, the Titanium core provides maximum strength in combination with the lightest weight.

STEALTH WINGS™
Ultra-light.

Stealth Wings are made of ultra-light stainless steel. The innovative Stealth design with large cut out holes provides maximum strength and stability while reducing weight. Stealth Wings are available in two versions: Stealth Wings for the Sensor and Stealth Wings Plus for the Sensor Plus. Stealth Wings are also available separately. Optimal for those who want to upgrade their existing Sensor or Sensor Plus.

CAPFUL™
Ultra-light.

Capful is made of genuine Polyethylene, specially cut. Polyethylene has the same strength and durability as Kevlar but is much lighter. Capful is available in two versions: Capful for the Sensor and Capful for the Sensor Plus. Capful is also available separately. Optimal for those who want to upgrade their existing Sensor or Sensor Plus.

CONTROL

Feel the difference.

Control is the key to safety. Control is the key to comfort. Control is the key to speed. Control is the key to success. Control is the key to fun. Control is the key to your life. Control is the key to your life. Control is the key to your life
