SECTION 2 LW

WAVE

SMALL WAVE PHENOMENON

IT'S BREEZY AND SURF'S UP. LET'S GO KITING!

Sometimes you need a little extra power and agility to ride those glassy, waist high rollers. Not the kind of stump pulling power that yanks you off your board. But rather, a more subtle power with finesse that pulls you effortlessly when needed and shuts off so you can ride the nose if you want. This small wave warrior may even have you wishing for the occasional light wind day. Because light wind days are the perfect days to practice all the stuff you want to do on the bigger days unless you live in Indonesia and the light wind days are the "big" days. If the wind picks up a little, stay out there. The LW's incredible range lets you have fun when others are fully depowered.

This drifting phenom with huge range pairs perfectly with any foilboard. Its lightweight construction, nimble behavior, and reduced lateral forces make it an unexpectedly awesome foiling kite. It won't yank you off your board, and it zips through lulls with ease. Yup, the Section 2 will amaze you with its foiling pedigree. Section 2 LW. All the power, control and agility to ride even the smallest (or biggest) of waves with the biggest of smiles.

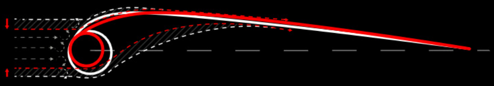
FEATURES

- ULTRA LIGHT FRAME
- SURF PROFILE
- EXOTEX® SLIM STRUTS
- CORETEX® LIGHT
- FUTURE-C SHAPE
- ULTRA LIGHT WINGTIPS
- SHORT BRIDLE SYSTEM
- CIT
- INSTANT AUTO RELAUNCH
- SPEED VALVE 2
- SPEED PUMP SYSTEM
- GRINTEX® PATCHES
- SENSOR BAR READY

KEY FEATURE SNAPSHOT

ULTRALIGHT 3 STRUT FRAME

Lightweight greatness. The Section 2 LW's acclaimed thin airframe design uses the least Dacron of any CORE kite. Our frames save weight, create superb lightwind balance, and impressive slack-line drifting. Three strut perfection. Strong. Stable. And light.



SURF PROFILE

The maximum camber is shifted further back and its aspect ratio is lowered (that means it's a little fatter) to improve drifting. We also re-worked the Section 2 LW's airfoil around the wingtips. Give it gas, and the Section 2 LW comes alive!

EXOTEX® ULTRA RIGID DACRON

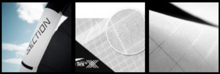
The benchmark for performance Dacron. No-stretch ExoTex Dacron incorporates a unique radial reinforcing thread pattern and emulsion (protective coating) process that enables higher pressure airframes with smaller diameters. Especially on LW kites, ExoTex improves airflow, flight stability, and rider feedback by substantially increasing tube strength and rigidity despite reducing diameters. Expect snappy turns, less weight, and endless smiles on your new Section 2 LW.

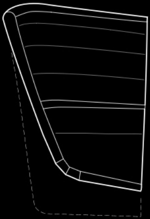
ExoTex®
ExoTex®
ULTRA RIGID DACRON

light
CoreTex®

CORETEX® LIGHT

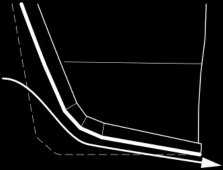
Exclusive to CORE. Our ripstop material is a lighter weight fabric created solely for our LW range. This lightweight fabric improves low wind performance yet provides incredible breaking strength, tear resistance, longevity and UV protection. Feel the tight, crisp signature of a CoreTex Light kite.





FUTURE-C SHAPE

Derived from the GTS's canopy shape, the Section 2 LW's moderate Future-C design delivers fast, tight turns and precise control.

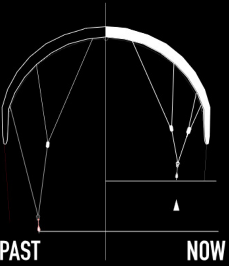


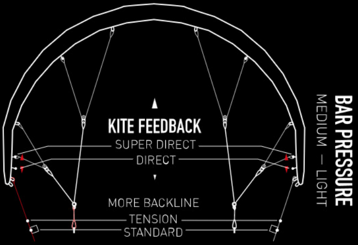
ULTRALIGHT WINGTIPS

ExoTex Dacron gave our engineers the freedom to redesign the wingtips with less dacron without compromising durability. Less material equals less swing weight. Less swing weight means faster turns.

SHORT BRIDLE SYSTEM

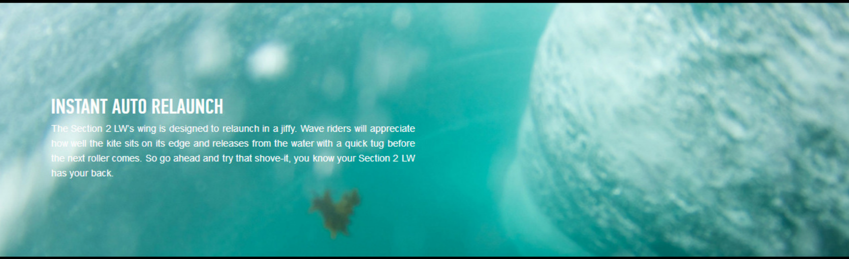
Short and sweet. The Section 2 LW's super short bridle system improves feedback so you can better feel your kite's position. The Section 2 LW pivots just off the wingtip resulting in super smooth loops regardless of size. In the larger kite sizes, this reflexivity increases even more so. Just imagine a kite that practically anticipates every turn, as if it's hot-wired to your brain.





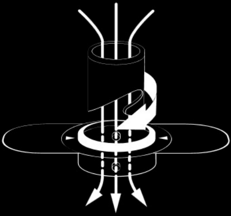
CORE INTELLIGENT TRIM SYSTEM (CIT)

Kite speed and steering feel are a matter of choice. Your choice. With two adjustable back line and front bridle connection points, our quick adjusting trim system gives you the freedom to customize your ride to suit your style. So go ahead and play with your trim settings and find your inner wave ninja.



INSTANT AUTO RELAUNCH

The Section 2 LW's wing is designed to relaunch in a jiffy. Wave riders will appreciate how well the kite sits on its edge and releases from the water with a quick tug before the next roller comes. So go ahead and try that shove-it, you know your Section 2 LW has your back.

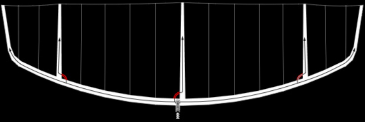


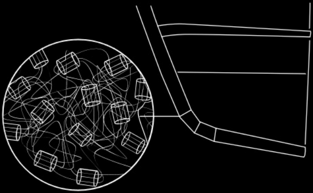
SPEED VALVE 2

No special hose adapter needed here! The Speed Valve 2 connects directly to any standard 20mm OD twist lock pump hose. The Speed Valve 2 maximizes airflow, minimizes inflation times and noticeably reduces pump pressure. This inflation/deflation system is so good you may even leave your electric pump at home.

SPEED PUMP SYSTEM

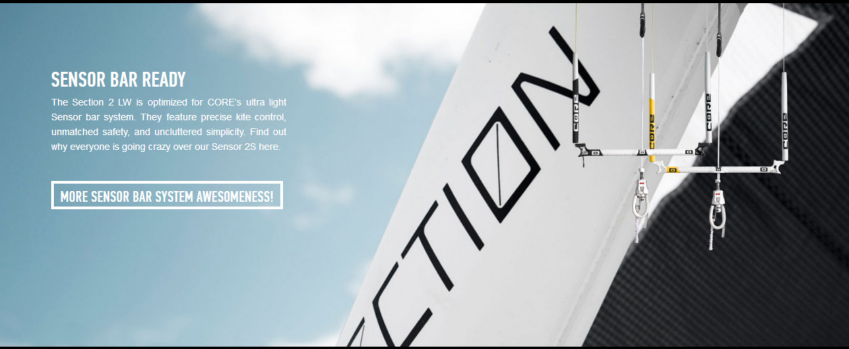
Fully pumped in no time. Huge air hoses and strut valves allow uninhibited air flow. And when you haven't kited in a few days, every second counts :)





GRINTEX® PATCHES

Anti-wear patches where you need them most. Extreme abrasion resistant patches on leading edge segment seams and struts give the Section 2 LW another level of protection from perfectly placed beach hazards.



SENSOR BAR READY

The Section 2 LW is optimized for CORE's ultra light Sensor bar system. They feature precise kite control, unmatched safety, and uncluttered simplicity. Find out why everyone is going crazy over our Sensor 2S here.
